EMPLOYEE SPOTLIGHT: Amy Williams

Empathy and expertise are keys to making sure that the clients understand what is going on in a way that allows them to also feel comfortable during what can be an uncomfortable time.

The bike rides of 250 kids will be a lot safer this summer, thanks to all of the parents who brought their children to our free helmet giveaway at the Traumatic Brain Injury Resource Center.

Some families drove as far as 25 miles to the event, which also featured raffles for a boy’s and a girl’s bike, educational information on traumatic brain injuries, and complimentary helmet fittings.

WTOL’s Dick Berry was also on hand and he interviewed Paige McKenzie, who had recently fallen off her bike and scraped her face. She and her mom travelled all the way from Lyons, Ohio for a helmet to prevent another injury from occurring.

Thank you to Jackie Moore, founder of the Traumatic Brain Injury Resource Center, and her team for sharing their beautiful space for the event, to Maurice Valley Movers for transporting the helmets, and to the Ohio Chapter of the American Academy of Pediatrics for their contribution of 132 helmets as part of their Put a Lid on It campaign.

**Did Abilify Contribute To Your Gambling Or Shopping Debt?**

Abilify is a commonly prescribed antipsychotic medication used to treat various symptoms associated with psychological disorders. When properly prescribed and monitored, Abilify can help address the symptoms of schizophrenia, bipolar disorder, Tourette’s Syndrome, autism, and depression. Abilify’s intended purpose is to decrease the intensity of mood swings, to combat depression, and to diminish auditory and visual hallucinations.

Abilify is listed as an atypical antipsychotic, which means that this medication works by blocking the dopamine receptors in the brain. While reports indicate that many experience relief from troubling symptoms while taking Abilify, others report serious side-effects such as:

- Uncontrollable sexual urges
- Gambling
- Binge eating
- Excessive shopping
- Other compulsive behaviors

Drug manufacturers are required to engage in extensive testing before they place a medication on the market. Abilify received approval from the FDA in March 2003. At that time, neither the FDA nor Bristol-Myers Squibb and Otsuka Pharmaceuticals—who manufacture the drug—indicated that Abilify could cause some of the aforementioned side-effects. Numerous federal laws require drug manufacturers and developers inform both doctors and the general public of any potential side-effects of their medications, as well as any ingredients that may cause injuries or side-effects.
